

### ABSTRACT

The present invention is a fluid supply device having a bellows shaped pipe 21  
midway in fluid supply piping, comprising: first filter means 19a that traps foreign  
matter in the fluid on the upstream side of the bellows shaped pipe 21; and second  
5 filter means 22 that traps foreign matter in the fluid discharged from the pipe 21 on  
the downstream side of the bellows shaped pipe 21.
